CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation and upstream initiation codon.

If this cannot be identified we choose an initiation initiation in the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

If this preceded by an upstream initiation in initiation codon.

If this cannot be identified we choose the most upstream initiation initiation codon.

If this cannot be identified we choose the most upstream initiation initiation codon.

If this cannot be identified we choose the most upstream initiation initiation codon.

If this cannot be identifie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             prediction is based on positional base preference in codons using specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Generally sites are given these have been used to deduce the initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                by the BBSRC.

Details of S. coelicolor sequencing at the Sanger Centre are available on the World Wide Web.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Provide protein hydrolysates enriched in particular amino acids, provide protein hydrolysate (DPAP) from control as flavour enhancers, e.g. in doughs

Provide present sequence encodes dipeptidyl aminopeptidase (DPAP) from control as engillus oryzae. DPAP acts synergistically with an aminopeptidase (CAP) to hydrolyse polypeptides, producing protein hydrolysate (PH), containing hydrolysate (PH), containing hydrolysate (PH), containing and in dough premixes, containing applications. DPAP increases the level of hydrolysis of proteins and thus control amixture with AP may hydrolyse tripeptides that are resistant to either enzyme used alone. PH have improved them have better flavour and formating properties, and products containing them are hydrolyse tripeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             იი

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
PS Claim 4; Fig 1; 84pp; English.

CC A method has been developed for the production of protein hydrolysates CC (PH) comprising reacting a protein with: (i) at least one polypeptide CC with Gly-releasing activity; and (ii) at least one other protease so CC used alone. PH are used to improve flavour of foods (e.g. baked goods) CC and as animal feed additives. PH are preferably also enriched in Glu CC (free and/or peptide bound), so have improved flavour and palatability. CC Addition of a polypeptide with Gly-releasing activity increases the CC degree of hydrolysis (or reduces the amount of enzyme needed) and CC hydrolysates have better solubility, and emulsifying and foaming CC properties. Baked goods containing them have improved aroma, mouthfeel CC and crust colour. The present sequence encodes Aspergillus oryzae CC aminopeptidase II, which is used in the method of the invention.

Pff enhancers, e.g. in doughs

ps Claim 1; Fig 1; 92pp; English.

CC Trace and the sequence encodes aminopeptidase (AP) II from Aspergillus

CC oryzae. AP is used in combination with an endopeptidase (EP) to

CC oryzae. AP is used in combination with an endopeptidase (EP) to

CC oryzae. AP is used in combination with an endopeptidase (EP) to

CC flydrolyse polypeptides, producing protéin hydrolysate (PH), useful in

CC fly (especially), Glu, Ser, Asp, Asn, Pro, Cys, Ala and/or Gln, or (b),

CC fl the substrate has been deamidated, in Glu (free and/or peptide bound),

CC in which case products are useful as animal feed additives. AP can be

CC used in flavour improving compositions (optionally containing EP) and in

CC dough pre-mixes. Also AP can be used for deactivating enzymes and for

CC converting precursors to mature proteins. AP increases the level of

CC hydrolysis of proteins and thus of flavour development. PH have improved

CC solubility, emulsifying and foaming properties, and products containing

CC them have better flavour, palatability and aroma.

PT Mycobacterial DNA vectors containing reporter constructs - for infection-associated protein expression

PT Identifying coding or promoter sequences involved in infection-associated protein expression

PS Claim 22; Fig 19D; 309pp; French.

CC Sequences x34001-x34252 represent nucleic acids encoding secreted proteins from various Mycobacterium species microorganisms. The CC uncleotide sequences can be used as primers and probes for methods CC for detecting and identifying mycobacteria, especially belonging to the M. tuberculosis complex. The encoded proteins can be used in CC vaccines for immunisation against a bacterial or viral infection.

CC vaccines for immunisation against a bacterial or viral infection.

Mycobacterial DNA vectors containing reporter constructs - for identifying coding or promoter sequences involved in infection-associated protein expression claim 22; Fig 19F; 309pp; French.

Sequences X34001-X34252 represent nucleic acids encoding secreted proteins from various Mycobacterium species microorganisms. The nucleotide sequences can be used as primers and probes for methods for detecting and identifying mycobacteria, especially belonging to the M. tuberculosis complex. The encoded proteins can be used in vaccines for immunisation against a bacterial or viral infection. Sequence 1587 BP; 288 A; 490 C; 533 G; 276 T;

PCR primer for 5' fixed sequence contg. T7 promoter and systematic peptide evolution by reverse translation; SPE specific; inhibitors; probes; assay; cell sorting; ss. Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example; Page 55; 102pp; English.

The sequence is that of an example randomising oligonucleotide which is used in the prepap. of mRNA encoding candidate polypeptides for the method of systematic polypeptide evolution by reverse translation (SPERT). The method provides a rapid way of isolating and identifying polypeptide ligands which bind to target mols. The polypeptide ligands which bind to target mols fine polypeptide ligands which bind to target mols. The polypeptide ligands as activators or inhibitors of target mol. function, as probes, as sequestering agents, drug delivery vehicles, modififers of hormone action and as catalysts. SPERT is used to select novel polypeptides that bind the antibody of the epitope commonly recognised by the antisera from autoimmune mice which are the fl progeny of a cross of NZB and NZW parents (Portanova et al., J. Immunol. 144, 4633, 1990). The known epitope consists of ca. 10 amino acids at the N-terminus of the histone HZE

DNA involved in streptogramin antibiotic biosynthesis prodn. or bio-conversion of streptogramin(s) or prodn. streptogramin intermediates, derivs. or hybrid antibic claim 2; Page 51-52; 83pp; French.

The snaB gene product is involved in the biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                              18-NOV-1994 (first entry)
snaB gene encoding enzyme in streptogramin biosynthet:
Antibiotic; streptogramin; snaA; snaB; snaC; biosynthe
biosynthetic pathway; Streptomyces pristinaespiralis;
Streptomyces pristinaespiralis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein. To make mRNA encoding candidate polypeptides a 5' fixed sequence composed of a 77 promoter sequence and a ribosome binding site which is recognised by both prokaryotic and eukaryotic ribosomes, terminating in a restriction endonuclease site is synthesised and cloned using a number of oligonucleotides (example shown). A 3' fixed sequence is placed into a restriction site to provide an mRNA encoding the C-terminal trailer sequence of ca. 100 nucleotides lacking stop codons. In addition, a 3' primer annealing site is provided so that cDNA synthesis can be accomplished on the mRNA recovered from partitioned ribosome complexes. See also Q38845-65.
                                                                                                                                                                            WPI;

The present sequence is the total DNA sequence from cosmid clones in LP(2)127 and LP(2)128, which contains a Streptomyces aureofaciens of the entire chloratory. The present sequence is the total DNA sequence from cosmid clones in LP(2)127 and LP(2)128, which contains a Streptomyces aureofaciens (ATCC 13899) DNA that encodes the proteins of the entire chlorateracycline biosynthetic pathway. The biosynthetic gene, which can be expressed in heterologous hosts, especially S. lividans, may be useful in the production of antibiotics.

Mutant microorganisms in which a step in the streptogramin biosynthetic pathway is blocked can be cultured to produce streptogramin intermediates, which may later be converted to streptogramin derivatives. Recombinant cells may also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1284

Disclosure; Fig 4A-L; 39pp; English.

Combination of two plasmids for cloning the invention relates to combination of two plasmids for cloning the biosynthetic production pathways of chlortetracycline, compared the plasmid contains an origin of creatized into their derivatives. One plasmid contains an origin of creplication, an actinomycete (such as Streptomyces lividans, compared to compared into the actinomycete lividans and contains and cartinomycete active origin of replication and three or more tandem contains and cartinomycete active origin of replication and three or more tandem contains and contains a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Loc

The vector for producing 7-aminocephem cpd. contains a DNA frag prepared by ligating at least one or more promoter(s) for A. chrysogenum to gene(s) for enzyme(s) capable of converting the cephalosporin cpd. to the corresp. 7-aminocephem cpd. to each oin that order from the upstream side to the downstream side by conventional methods. An appropriate selective marker, autonomously replication sequence, terminator, translation acti
The promoter may be the promoter for the A. chrysogenum alkaline protease gene as represented here.

Disclosure; Fig 1-5-(1-2); 86pp; English.

The vector for producing 7-aminocephem cpd. contains a DNA frag prepared by ligating at least one or more promoter(s) for A. chrysogenum to gene(s) for enzyme(s) capable of converting the cephalosporin cpd. to the corresp. 7-aminocephem cpd. to each o in that order from the upstream side to the downstream side by conventional methods. An appropriate selective marker, autonomously replication sequence, terminator, translation acties desired sites.

Single step fermentative prodn. of 7-amino-3-cephem cpds. -
culturing Acremonium chrysogenum transformed with vector en
enzyme involved in N-deacylation
Disclosure; Fig 1-4-(1-3); 86pp; English.
The vector for producing 7-aminocephem cpd. contains a DNA
prepared by ligating at least one or more promoter(s) for A
chrysogenum to gene(s) for enzyme(s) capable of converting
cephalosporin cpd. to the corresp. 7-aminocephem cpd. to ea

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The promoter may be the promoter for the A. chrysogenum alkaline protease gene. The alkaline protease cDNA was obtd. based on expression of a protein fused with lambdagtl1 beta-galatosidase followed by antibody screening. The two frames are just in phase. The cDNA is joined to lambdagtl1 via a 21 bp GC tailing portion. Sequence 1546 BP; 309 A; 565 C; 406 G; 266 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 conventional methods. An appropriate selective marker, autonomously replication sequence, terminator, translation activating sequence and so forth may be inserted into the vector at respective

An appropriate selective marker, autonomously replication sequence, terminator, translation activating sequence and so forth may be inserted into the vector at respective desired sites.

The promoter may be the promoter for the A. chrysogenum isopenicillin N synthetase gene, the beta-isopropyl malate dehydrogenase gene or the alkaline protease gene as represented here. The promoter may contain an enhancer sequence.

GENERAL INFORMATION:

APPLICANT: PETERSEN, CAROLYN

APPLICANT: LEECH, JAMES

APPLICANT: LEECH, JAMES

APPLICANT: GUT, JIRI

TITLE OF INVENTION: VACCINES, ANTIBODIES, PROTEINS, GLYCOPROTEINS, DNAS AND RNAS

TITLE OF INVENTION: FOR PROPHYLAXIS AND TREATMENT OF CTYPTOSPORTIAL PARTUM

TITLE OF INVENTION: INFECTIONS

FILE REFERENCE: 480.19-4(HY)

CURRENT APPLICATION NUMBER: US/08/700,651B

CURRENT FILING DATE: 1997-08-14

EARLIER FILING DATE: 1995-04-03

NUMBER OF SEQ ID NOS: 15

SOFTWARE: Patentin Ver. 2.0
